Working History Summary

I started my career in Aramco in 1977 as trainee then offshore facility's operator. Starting 1978 to 1984 I was studying in Aramco industrial training center and work as well in offshore during schools holidays.

In 1984 I was granted a scholarship and went to University of Arizona, Tucson , a well-known university in Systems engineering. I graduated from the university in Dec 1988 in Systems Engineering. Many people relate systems engineering to Computers and IT. However, Systems engineering can be used in everything in our life. Fortunately, my education was going well with my personal interest and my character. This was clear in my career path.

Starting 1989 I worked as field engineer, engineering supervisors, facility's managers, project engineers and finally as a project director, business owner and free-lancing consultant.

In 30 years' experience, I build up large networking and expand my horizon to cover all basic disciplines in oil and gas, engineering, construction, operation and maintenance. Consequently, I have developed high skills in project management, oil and gas operation and maintenance, contracts administration.

I have good contacts with major EPC contractors in the area, world prominent engineering firms and specialized institutes to do advance studies such as structure analysis, modeling, ETAP etc. I have a good relation with major suppliers and subcontractors around the world.

Having said the above, my education complementing my expertise and good networking is serving as a great mix for helping clients to meet their challenges.
