

Execution Plan

Company generic execution for execution plan is as

- 1- Local team stationed as close as possible to client premises and could be with the client team to achieve maximum coherence and smooth cooperation.
- 2- Team will be fully dedicated to the client
- 3- Team size will be as per scope of work requirement and will be adjusted with time to meet the requirement.
- 4- Team will have local management and supporting team
- 5- Special skills such as HAZOP facilitators and Environmental studies consultant will be sourced out from reputable services providers and with agreement of the client
- 6- Third party inspectors will be deployed in strategic locations such as S. Korea, India, Netherland and USA to achieve minimum lead time for inspection requirements
- 7- Advance web site system will be established for company to use & manage as well as client can monitor. Special access can be provided to client to monitor activities online form his own office at any time. The interactive web will be managed and supported by Company.

In addition to above; the attached organization chart will be implemented in principle for resource optimization; some functions will be managed by one or more person. Or one person might assume more than one function. However, team will be adjusted as job requirement.

At beginning; a core team will be assigned on site and will work very closely with client to meet all requirements. With time team size and structure will be adjusted. When activities moved to construction site, an organization shift will be applied to ensure meeting site requirements.

With project progressing, focus will be on QA/QC and commissioning more. The more project is advancing the more attention will be give to commissioning activities and preparation with keeping QA/QC alerted and HSEM execution team enacted. In addition, training onsite will be conducted for all relevant disciplines to achieve maximum results.
